The invention relates to a novel isolated SECP (secreted protein)

Complexity, relaxant, antithyroid, antidiabetic, cytostatic,
dermatological, immunosuppressive, antiinflammatory, thyromimetic,
dermatological, immunosuppressive, antiinflammatory, thyromimetic,
antiallergic, cerebroprotective, gastrointestinal, hepatotropic,
antiallergic, anticonvulsant, antiparkinsonian, antibacterial,
compliant anticonvulsant, antiparkinsonian, antibacterial,
antiparasitic, fungicide, protozoacide, virucide, uropathic,
antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic
antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic
contivities. The polypeptide may be useful in diagnosing, preventing and
treating disorders including neurodegenerative disorders such as
cortivities. The polypeptide may be useful in diagnosing, preventing
compounce dystrophy and catatoria, endocrine disorders particularly
cdiabetes and Grave's disease, cancers such as leukaemia, cervical or
breast cancer, immunological disorders including scleroderma, systemic
competent infections particularly viral, bacterial, fungal, parasitic,
competed infections particularly viral, bacterial, fungal, parasitic,
and hepatic diseases particularly cirrhosis. The polymucleotides may be
context therapy procedures. The current sequence is that of the human SECP cDNA

This invention relates to novel membrane proteins that are associated with differentiation and/or metabolic function of adipocytes, in particular of mouse origin. Specifically, it refers to the isolated nucleic acid molecules encoding all or part of these proteins, appropriate antibodies and screening assays useful for the development of drug compositions derived thereof. The present invention describes these compositions as useful for the treatment of diseases associated with abnormalities of adipocyte function, such that they can be used to prevent, treat or diagnose obesity, hypertension, hyperlipsemia, diabetes and arteriosclerosis. Accordingly, they exhibit anorectic, antidiabetic, antianteriosclerosic, antilipsemic and hypotensive activities. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ProLysLysMetGlyProlleArgSerTyrLeuThrPheValLeuArgProValGlnArg 109

The invention relates to an isolated polymucleotide encoding a polympetide with biological activity. The polymucleotides and polympetides are useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polymocleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising mathbodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering damaged or diseased tissues, for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and/or nerve tissue growth or cegeneration, in wound healing, in tissue repair and replacement, in healing of burns, incisions and ulcers, and in treating cancer. The present sequence represents CDNA encoding a novel human protein.

The invention relates to human secreted proteins (SECP) and nucleic acid molecules encoding such proteins. SECP agonist and/or antagonist is useful for treating diseases associated with decreased expression or overexpression of functional SECP. The disorders treated include cell proliferative disorders such as cancer, arteriosclerosis, although such as capaired immune deficiency syndrome confirmancy disorders such as acquired immune deficiency syndrome (AIDS), allergies, anaemia, asthma, autoimmune thyroiditis, Crohn's disease, diabetes mellitus, Goodpasture's syndrome, Grave's disease, comultiple sclerosis, mysethenia gravis, pancreatitis, uvetis, Werner syndrome and infections; cardiovascular disorders such as congestive heart failure, myocardial infarction, ischaemic heart disease and angina pectoris; neurological disorders such as stroke, Huntington's disease, Alzheimer's disease, Pick's disease, epilepsy, dementia, and Parkinson's disease, and developmental disorders such as renal tubular acidosis and cushing's syndrome. SECP DNA is useful to create knock-in humanised containing genomic sequence, and an and in mile of the naturally cocurring genomic sequence, and in molecular biological techniques. The process of the second of the condition of the naturally conserved of the condition of the condition of the naturally conserved of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       296 ccigraccreiriraractrectririccricaecerrerereserrereacacacacae 355

The invention relates to a novel human protein with cancer inhibiting function. Also disclosed is the polynucleotide encoding the protein, a method for preparing the polypeptide by a recombinant technique, and an antagonist against the polypeptide by a recombinant technique, and an treating diseases, such as cancers. The polypeptide is useful for treating diseases, such as cancers. The current sequence represents a human cancer inhibiting protein encoding CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -----retregaggeaggeaggeaggeager

                                                                                                                                                                                                                The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the

the invention trainers to a novel isolated safe, becated protein)

polypeptide. The polypeptide of the invention demonstrates

cermatological, immunosuppressive, antidiabetic, cytostatic,

dermatological, immunosuppressive, antidiabetic, cytostatic,

antiallargic, cerebroprotective, gastrointestinal, hepatotropic,

antiparasitic, anticonvulsant, antiparkinsonian, antibacterial,

cereivities. The polypeptide may be useful in diagnosing, preventing and

certivities. The polypeptide may be useful in diagnosing, preventing and

treating disorders including neurodegenerative disorders such as

continhematic, cardiant, cardiants, anti-HIV and nootropic

activities. The polypeptide may be useful in diagnosing, preventing and

treating disorders including neurodegenerative disorders including

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders particularly

controlic dystrophy and catatonia, endocrine disorders

controlic dystrophy and catatonia, endocrine disorders

controlic dystrophy and alsease, ranal disorders e.g. Goodpasture's

controlic diseases particularly viral, bacterial, fungal, parasitic,

cond hepatic diseases particularly viral, animals, as well during gene

controlic dystrophy procedures. The current sequence is that of the human SECP cDNA

the present invention describes primer sets for synthesising 5002 full-complementary defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide complementary to the complementary strand of a polymuclectide which comprises one of the 5602 nucleotide sequences defined in the specification, where the chigonucleotide comprises at least 15 nucleotides; or (b) a combination of a polymucleotide which comprises a 5'-end complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence, where the complementary to a coligonucleotide comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in gene therapy. The primer sets can be used in antisense therapy and in geneticularly full-length cDNAs. The primers are also useful for the categorical and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and sequences; AAH13613 to AAH1842 represent human amino acid sequences; and AAH13629 to AAH13622 represent colligonucleotides. all of which are used in the exemplification of the primer sets for synthesising 5602 fullpresent invention

Sequence 2796 BP; 763 A; 732 C; 711 G; 590 T; 0 U; 0 Other;

This full-length cDNA clone, designated cw1233 3, codes for a novel human secreted protein (see AAW69430), i.e. cw1233 3 protein. It was isolated from a human foetal brain cDNA library using methods which are selective from a human foetal brain cDNA library using methods which are selective cor cDNAs encoding secreted proteins, or was identified as encoding a secreted protein on the basis of computer analysis of the encoding protein. Homology is shown to some database sequences. The invention provides isolated polymucleotides (see AAV58754-63) obtained from human adult testis, brain, retina or placenta, or from foetal kidney or brain cDNA libraries. These are all deposited as ATCC 98353. They canced novel human secreted proteins (see AAW65423-33) that may have e.g. nutritional activity, immune stimulating or suppressing activity, haemostatic activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, antiinflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition or other activities. They may also be used for diagnostic purposes

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 168,

```

```
APPLICANT: YOSHIDA, Aruto
APPLICANT: YOSHIDA, Aruto
APPLICANT: TAKEUCHI, MAKOCO
TITLE OF INVENTION: PEPTIDE SEQUENCE THAT FORMS MUCIN SUGAR
TITLE OF INVENTION: CHAIN AND TECHNIQUE FOR MODIFYING PROTEIN TO BE LINKED
TITLE OF INVENTION: WITH MUCIN SUGAR CHAIN
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEB: FOLEY & Lardher
STREET: 3000 K Street, N.W., Suite 500

Sequence 78 Application US/09001984C

Patent No 624531;
GENERAL INFORMATION:
APPLICANT: Laal, Suman
APPLICANT: Laal, Suman
APPLICANT: Belisle, John T

TITLE OF INVENTION: BARLY DETECTION OF WYCOBACTERIAL DISEASE
FILE REFERENCE: NYU-011
CURRENT APPLICATION NUMBER: US/09/001,984C
CURRENT FILING DATE: 1997-12-31
PRIOR APPLICATION NUMBER: 60/034,003

PRIOR PLING DATE: 1996-12-31
NUMBER OF SEQ ID NOS: 106
SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ծ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 45, Application US/08537871A
Patent No. 6838254
GENERAL INFORMATION:
APPLICANT: Raymond HAMERS
APPLICANT: Cecile HAMERS-CASETERMAN
APPLICANT: Serge V. M. MUYLDERWANS
APPLICANT: Serge V. M. WUYLDERWANS
APPLICANT: Cornelis T. VERRIPS
TITLE OF INVENTION: Production of antibodies or (functionalized)
TITLE OF INVENTION: fragments thereof derived from heavy chain immunoglobulins
                                                                                                        APPLICANT: Cecile HAMERS-CASETERMAN
APPLICANT: Serge V. M. WUYLDERMANS
APPLICANT: Serge V. M. WUYLDERMANS
APPLICANT: Leon G. J. FRENKENS
APPLICANT: Cornelis T. VERRIPS
TITLE OF INVENTION: Production of antibodies or (functionalized)
TITLE OF INVENTION: Gragments thereof derived from heavy chain immunoglobulins
TITLE OF INVENTION: of Camelidae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Eur. J. Blochem. 219:145-154(1994).
-!- FUNCTION: Possesses a potent antimicrobial activity against
bacteria, fungi and protozoa. Probably acts by disturbing membrane
functions with its amphipatic structure.
-!- SUBCELDIDAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Skin.
-!- SIMILARITY: Belongs to the frog skin active peptide (FSAP) family.
Dermaseptin subfamily.
                                                                                                                                               SEQUENCE.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists sesentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl. see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide
of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New 254PID6B BIRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a 254P1D6B small interfering RNA (siRNA)

that encodes the protein; (3) a composition comprising a polynucleotide that that full complement of the polynucleotide described above; (4) (generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein or a 254PloBB-related protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and contract or a diagnostic agent, reproduction or survival of cancer cells that express the protein of P1. 254PloBB has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PloBB gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises,
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              254PID6B; small interfering RNA; siRNA; immune response;

consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pt. see SEQ ID NO:3, 5 or 7 ADR00592, ADR00596, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cany of the test 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99* homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide that encodes the protein of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein or a 254PID6B-related polymucleotide; (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; a non-human transgenic animal that produces the antibody; (10) a composition and administration of P1; (7) a pharmaceutical correction of a protein of P1; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a chypridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PID6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254PID6B v.3 peptide, which is used in the exemplification of the present invention. The human 254PID6B gene is located on chromosome 6p22.

New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 13; SEQ ID NO 262; 345pp; English.

The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence witch encodes the couples protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous continuous amino acids of a protein of figure 2 (PI), see SEQ ID COMBISTS essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (PI), see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein contiguous amino acids sequence of PI; (2) a polymucleotide that encodes the protein; (3) a composition comprising a polymucleotide contexting a mammalian immune response directed to the protecin of PI; (5) detecting, in a sample, the polymucleotide described above; (4) contexting in a sample, the presence of a 254PlD6B-related polymucleotide; (6) a composition that modulates the crapos directed to the protein or a 254PlD6B-related polymucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human composition that comprises the composition described above in a human composition that comprises the composition are surfibed above in a human composition of prices of composition of prices of context of protein of PI; (7) a pharmaceutical composition of prices of context of protein of PI; (1) inhibiting growth, reproduction or survival of cancer cells that express the protein of PI; (1) inhibiting growth, reproduction or survival of cancer cells that express the protein of PI; (1) inhibiting and detecting cancer. The present sequence correction of the human 254PlD6B v.2 peptide, which is used in the exemplification of the process of the protein of the protein of the protein of the protein of the protein of pricesent invention. ```
The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the controlled stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous in length. Also described. (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0594). ADRO0596, or a peptide in nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO05952, ADRO0596, or a peptide in namy of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99‡ homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99‡ homologous or identical to an entire amino acid sequence of Pl; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of Pl; (5) generating a mammalian immune response of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the statut dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the antibody; (10) a non-human transgenic animal that produces the animal transfer animal that produces the animal animal transgenic animal that produces the animal animal transgenic animal that produces the animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hybridoma that produces the antibody; (11) delivering a cycloxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254Plo6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents a human 254Plo6B v. 5 peptide, which is used in the exemplification of the present invention. The human 554Plo6B gene is located on chromosome 6p22.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cast be nucleotides in length. Also described: [1] a composition that comprises, cucleotides in length. Also described: [1] a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID ONC), So 7 ABR00999, ABR00999, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein canny of the 42 lists of peptides, given in the specification, or a protein canny of the 42 lists of peptides, given in the specification or a protein canny of the 42 lists of peptides, given in the specification or a protein canny of the 42 lists of peptides, given in the specification or a protein canny of the sample amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) detecting, in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polymucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human cuit dose form; (8) an antibody or its fragment, which is monoclonal; (9) which shams transgenic animal that produces the antibody; (10) a pharmacturical and antibody or its fragment, which is monoclonal; (9) which shams transgenic animal that produces the antibody; (10) a pharmacturical animal transgenic animal that produces the antibody; (10) a pharmacturical animal transgenic animal that produces the antibody; (10) a pharmacturical animal transferince animal that produces the antibody; (10) a pharmacturical animal transferince animal that produces the animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal animal anim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PLD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PLD6B peptide, which is used in the exemplification of the present invention. The human 254PLD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hybridoma that produces the antibody; (11) delivering a cytotoxic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence withch encodes the cast double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous cullectides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID CON 31, 5 or 7 ARR00522, ARR00594 or ARR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein can or or any of the 42 lists of peptides, given in the specification, or a protein can or or or any of the 42 lists of peptides, given in the specification, or a protein can or or or a composition acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) a canting a mammalian immune response directed to the protein of P1; (5) a generating a mammalian immune response directed to the protein or a castplo6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition does form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a pharmaceutical continual dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a pharmaceutical continual dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a pharmaceutical continual dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the animal dose form; (8) and antibody or its fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   hybridoma that produces the antibody; (11) delivering a cycloxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cyclostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlD6B protein, or corresponds to a subsequence of the ocodes the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists of a peptide of eight, nine, ten, or consists sesentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 [PL, see SEQ ID NO.3, 5 or 7 ADROGS92, ADROGS94 or ADROGS96), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein CC that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein or a cereating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PlD6B-related protein or a 254PlD6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses a protein of P1; (7) a pharmaceutical count dome form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and correct cells that expresses the protein of P1; and correct cells that cypresses the protein of P1; and correct or a diagnostic agent, reacting and detecting one survival of cancer cells that expresses the protein of P1; and correct ing cancer the man 254PlD6B genetic invention or survival of cancer cells the human 254PlD6B genetics or survival or capresent invention. New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Example 9; SEQ ID NO 178; 345pp; English.

New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting

Example 9; SEQ ID NO 208; 345pp; English.

and treating cancer.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the controlled solid open reading frame (ORF) sequence which encodes the controlled siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous mucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein control to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) centraling in a sample, the presence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) centraling in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related polymucleotide; (6) a composition that modulates the composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that expresses the antibody; (10) a non-human transgenic animal that expresses the antibody; (10) a protein of price of a control of prices the antibody; (10) a non-human transgenic animal that expresses the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254P106B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P106B peptide, which is used in the exemplification of the present invention. The human 254P106B gene is located on chromosome 6p22.

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the cast the nucleic acid open reading frame (ORF) sequence of the ORF, where the 254P1D6B protein, or corresponds to a subsequence of the ORF, where the caption or corresponds to a subsequence of the ORF, where the couple stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists a sesentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID CC NO:3, 5 or 7 ADRO652, ADRO6594 or ADRO6596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein control of that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that tencodes the protein; (3) a composition comprising a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein of a 254P1D6B-related polymucleotide; (6) a composition that modulates the composition that modulates the composition that comprises the composition described above in a human continuant transgent animal that produces the antibody; (10) a pnarmaceutical continuant transgent animal that produces the antibody; (10) a composition of a continuant animal that produces the antibody; (10) a pnarmaceutical continuant transgent animal that produces the antibody; (10) a pnarmaceutical continuant transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal transgent animal that produces the animal animal animal transfer the animal animal transfer the animal animal animal animal animal animal

hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PID6B has cytostatic activity, and can be

```

```
The present invention describes a 254PlD6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the couble stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) generating a mammalian immune response directed to the protein or a captured polymucleotide; (6) a composition that modulates the capture of a cell that expresses a protein of Pl; (7) a pharmaceutical composition that comprises the composition described above in a human
                                                                                                                                                                          ö
used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254P1D6B peptide, which is used in the exemplification of the present invention. The human 254P1D6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New 254PID6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PiD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                          Gaps

composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PDOBS protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (PI). No.3, 5 or 7 ADRO0594, ADRO0595, or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein identical to an entire amino acid sequence of PI; (2) a polynucleotide that encodes the protein; (3) a composition comprising a polynucleotide
                                                                                                                                                                                                                                                                                              ö
unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hybridoma that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of Pi; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of Pi. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B peptide, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New 254PiD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PiD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a 254P1D6B small interfering RNA (siRNA)

that is a full complement of the polynucleotide described above; (4)
generating a mammalian immune response directed to the protein of Pl; (5)
detecting, in a sample, the presence of a 254PloBe-related protein or a
254PloBe-related polynucleotide; (6) a composition that modulates the
status of a cell that expresses a protein of Pl; (7) a pharmaccutical
composition that comprises the composition described above in a human
unit dose form; (8) an antibody or its fragment, which is monoclonal; (9)
a non-human transgenic animal that produces the antibody; (10) a
a non-human transgenic animal that produces the antibody; (10)
a diagnostic agent to a cell that expresses the protein of Pl; and
(12) inhibiting growth, reproduction or survival of cancer cells that
express the protein of Pl. 254PlDB has cytostatic activity, and can be
used in gene therapy. The compositions, molecules and methods are useful
contracting and detecting cancer. The present sequence represents the
human 254PlDGB peptide, which is used in the exemplification of the
present invention. The human 254PlDGB gene is located on chromosome 6p22. Sequence 9 AA; \$

Example 9; SEQ ID NO 56; 345pp; English.

New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254PlDGB protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or The present invention describes a 254PlD6B small interfering RNA (siRNA)

c eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID
NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596, or a peptide included in
the 42 lists of peptides, given in the specification, or a protein
that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or
identical to an entire amino acid sequence of P1; (2) a polymucleotide
that encodes the protein; (3) a composition comprising a polymucleotide
that is a full complement of the polymucleotide described above; (4)
generating a mammalian immune response directed to the protein of P1; (5)
generating a mammalian immune response directed to the protein of P1; (5)
generating, in a sample, the presence of a 254PD6B-related protein or a
254PD6B-related polymucleotide; (6) a composition that modulates the
status of a cell that expresses a protein of P1; (7) a pharmaceutical
composition that comprises the composition described above in a human
unit dose form; (8) an antibody or its fragment, which is monoclonal; (9)
a non-human transgenic animal that produces the antibody; (10) a
hybridoma that produces the antibody; (11) delivering a cytotoxic agent
corresponded the protein of P1. 254PlD6B has cytostatic activity, and can be
used in gene therapy. The compositions, molecules and methods are useful
for treating and detecting cancer. The present sequence represents the
human 254PlD6B peptide, which is used in the exemplification of the
present invention. The human 254PlD6B gene is located on chromosome 6p22.
